

What's New

Dolphin Mobile version 4

Dolphin Mobile version 4 includes new features, performance enhancements, and an entirely new look.

New Interface / New Technology

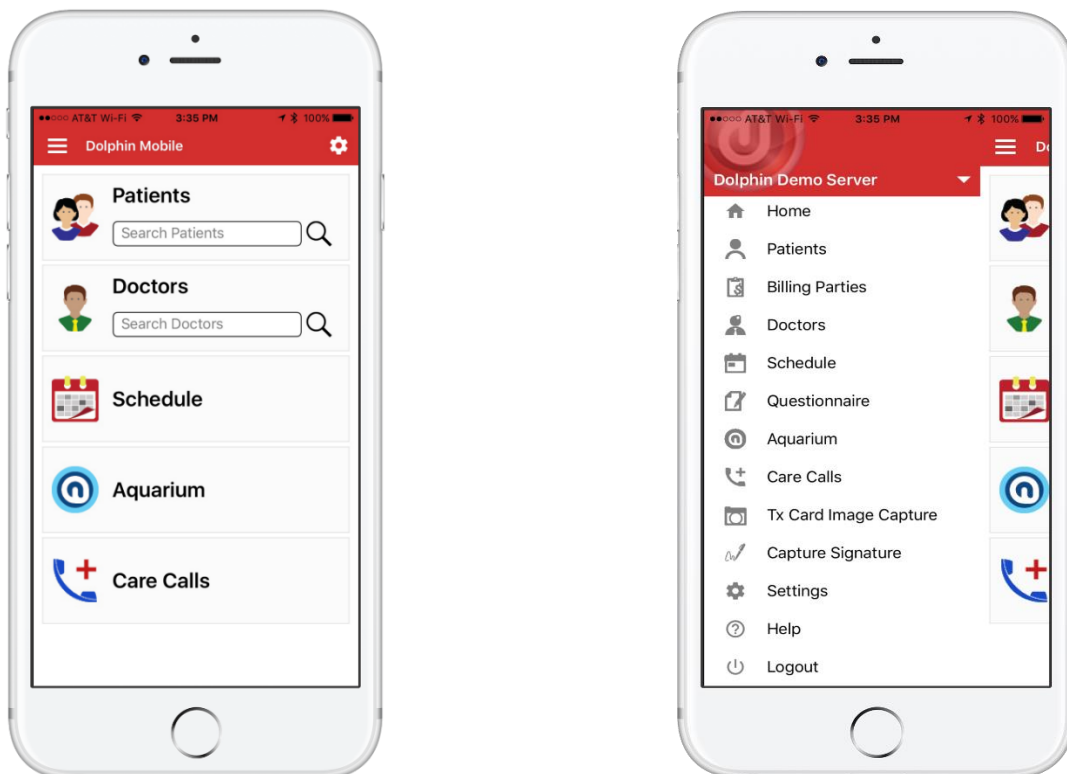

We've completely re-engineered the interface in Dolphin Mobile. The app has a fresh, more current look and feel. And as you use the app, you'll notice global refinements and changes: new icons, buttons, navigation and organization. The goal is a better user experience.

We've also upgraded the development technology of the app. This better positions us technically to respond to the rapidly changing mobile product landscape. This upgrade applies to iOS and Android platforms. An additional benefit is the feature set of Dolphin Mobile iOS and Dolphin Mobile Android are now identical and will stay in synch going forward.

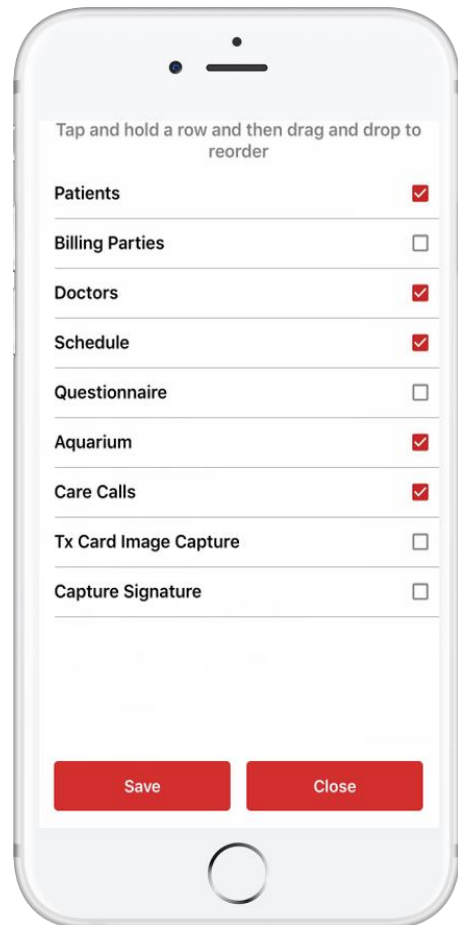

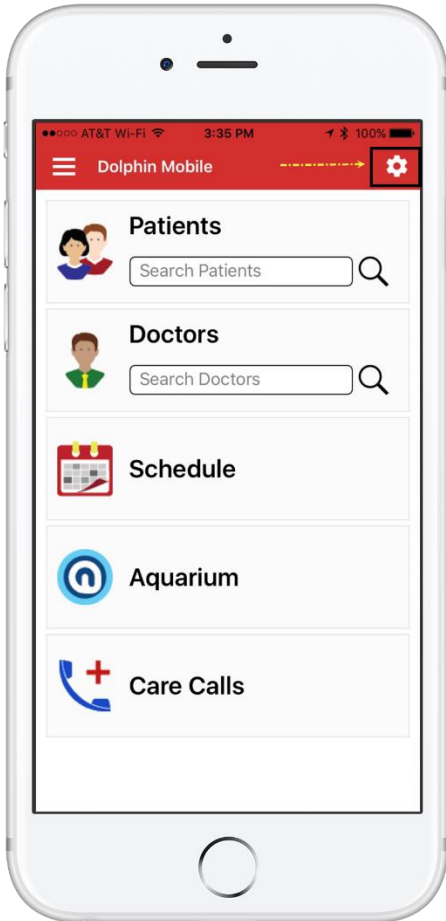

A significant benefit of this upgraded technology in version 4 is that all features are now available on both platforms and all devices. For example, in previous versions of Dolphin Mobile, Super Questionnaire was only available on Apple iPads. Now, Super Questionnaire is available on both iOS and Android and both phones and iPads.

Here are a few screen shots.
